nanocarrier, composed of egg

lecithin and 1,2-dimyristoyl-sn-glycero-3-phosphocholine (DMPC), has been developed to be targeted to enterocytes. We hypothesized that an active-targeting property could be conferred to the carrier by conjugating the carboxyl group of 1,2-dimyristoyl-sn-glycero-3-phosphoethanolamine to the primary amino group of the peanut allergen alpha-lactalbumin.

The physicochemical properties of this carrier (PL) have been compared with those of a non-targeted (PT) and a (PL)-alpha-lactalbumin carrier (PL-alpha-L) in which alpha-L was conjugated to the carrier. In both PT and PL-alpha-L, the hydrodynamic diameter (Z-ave) was 54.3 nm and the zeta-potential was -20.4 mV. In these

"Advanced MP3 Converter" is an application which allows you to encode media files to audio tracks of several formats, including WAV, MP3, FLAC and OGG. The interface of the program is plain and intuitive. Media files can be imported into the list by using the file browser only, since the "drag and drop" method is not supported. Batch processing is allowed. In the queue you can

check out the name, length, size, type and file information of each audio track. So, once you specify the output destination and format, you can proceed with the encoding process. In addition, you can configure audio and video parameters for each format when it comes to the channel, sample frequency rate, bits per sample, quality, compression level, format type and others. Settings can be

restored to their default values at any time. Advanced MP3 Converter also lets you split audio files by marking their start and end time, enable to always overwrite existing files and to open the output folder or write the tag information after conversion, select the play mode, set the default output format, adjust the skin hue, and more. The audio conversion tool requires a

moderate amount of system resources, includes a well-drawn help file (too bad it doesn't have snapshots), has a good response time, quickly finishes a task and manages to preserve a very good sound quality. No errors have popped up during our tests and we strongly recommend Advanced MP3 Converter to all users.

Now! Drones to Send Human Tails

and GPS Tracking By: Sorin Izvoranu May 13, 2014 | Updated: June 22, 2014 | 18:55 It's going to be a very crowded field. Another point of growing competition is the field of camera-equipped drones, which, besides being carried by unmanned aerial vehicles, are becoming increasingly more popular among those looking for ways to film weddings and events. A research

group at the Fraunhofer Institute for Telecommunications, Heinrich Hertz Institute (HHI) in Berlin has developed technology that allows drones to send human appendages like a person's nose and ears to far-away receivers, as well as track the movement of unmanned aerial vehicles via GPS. A person's appendages can be picked up by a receiver that can detect the sounds a person makes when it moves,

which can allow the receiver to locate and track the person. GPS
