

Download

Everything works on Linux, but Windows 7/8.1/ and 10 tech preview don't recognize any of my stuff on my machine. It looks like the only real alternative is Linux. Luckily, I can access it through the virtual machine. However, I can't install the GNOME environment and can't boot it. I don't even see how to download it. I can't install other things on Ubuntu like Xorg and Apache. I tried using PBI. I don't have SSH access to my computer, but I can use an X server on VMware. I couldn't find a way to access my computer using xterm, vnc or anything else.
