If you want to have the complete package of Google Calendar Delphi Component here is the link to the direct download link:Google Calendar Delphi Component Included in this update are a few minor features, which I want to introduce here in short. They provide for Google Calendar a better experience. i) New features: â€¢ Now itâ€™s possible to move the description of an event from one Google Calendar to another (useful if you have some one-on-one communication, when one person is on the other calendar and would like to see what is going on on that other personâ€™s calendar). â€¢ You can add new columns by editing the Google Calendar XML. This means, you can easily change for instance the start time/end time or the description of the event. â€¢ You can disable online editing, by editing the Google Calendar XML. This way you will be able to edit your calendar offline. â€¢ You can exclude one or more people from the event list. â€¢ You can add gmail addresses to the to: e-mail-address-field in the event. This will create a copy of the event to the corresponding gmail-address on the corresponding calendar. â€¢ You can add an attachment to the event. â€¢ You can set the event color. â€¢ A new setting in the Google Calendar API allows

Google Calendar Delphi Component Free [32|64bit]
