Note For the details of this chapter, see the Cheat Sheet. # A Crash Course in Photo Restoration In this section, you'll look at some of the most common problems encountered when editing photos (and how to fix them). I explain what each program does and some of the key commands, but you may feel more comfortable using a different program for some of the steps. When you edit the images in any of the Photoshop editing programs, you can have lots of fun. In general, editing simple images is relatively easy. This is because most of the tools that you use for photo editing are relatively straightforward. You can easily use the menu choices to correct your mistakes, and you're unlikely to get stuck on an adjustment because it's not possible to get completely

lost. To edit more complex images, you need to think in layers. With layers, you can adjust your image in multiple ways to achieve the desired effect. And you can get lost in the process. It's easy to become confused, and beginners often don't know what a good-looking image looks like until after they've spent a long time trying to fix their first image. As a result, beginners are often frustrated and disappointed with the results, often deleting the original image and starting over. * **Color Adjustment** *. This section shows you how to use the Levels tool and the Gradient tool for color correction. * **Edge-Enhancing Techniques** *. This section gives you a crash course in basic photo sharpening and shows you how to use the Sharpen tool and the Smudge tool to soften a sharp image. * **Grayscale Adjustments** *. This section shows you how to use the Levels tool

[Statins and hepatic steatosis]. Hepatic steatosis is a liver damage characterised by excessive hepatic fat accumulation. It is linked to insulin resistance, but its pathophysiology is yet to be entirely elucidated. Recent studies have shown that statins, which are widely used in primary prevention of cardiovascular events, are able to decrease the risk of hepatic steatosis in patients with insulin resistance. However, these studies are biased by several methodological issues related to the analysis of data.

Q: Numpy partial slice operation to reduce dimension of input array I'm trying to figure out how to perform partial slicing to reduce dimension of input numpy array. Say I have the array `myarray = np.random.randn(4,2)` `myarray[:,0]` will return an array of length 4 containing each row of the original array. My goal is to get an array of length 3, where the last 2 rows of the original array are discarded, leaving the 1st row intact. The output should look like `print(myarray[:,3]) [0.43155546 -1.5103972]` or `print(myarray[:,2:]) [-1.5103972 0.43155546]` I tried the following, but it seems it will iterate over the same dimension of the array and do computation. `myarray[:,2:].T [-1.5103972 0.43155546 nan nan nan nan]`

A: You can slice 2: at the end, and then to make the first three rows final output, do - `m,n=myarray.shape out = myarray[2:,:n-2]` Sample

```
run - In [321]: myarray = np.random.randn(4,2) In
[322]: myarray[:,0] Out[322]: array([[ -2.85039796,
-1.64989461, 1.23598353, -0.33816074], [ 0.576435

President Trump bashed the New York Times, again, on Monday night, urging his supporters to "get their act together and vote" for Republicans for the midterms. During a rally in Erie, Pa., Trump said, "The [New York] Times has said very negative things about me and my administration and we're fighting back." "Right now, I have to say, we are winning," he added. "But I have to say, get your act together and vote. The election is coming up. We have to get out and vote." Trump bashed the "fake news" media for its recent report — discredited by fact-checkers — that he directed Michael Cohen to lie to Congress during the ongoing investigation into Russian interference in the 2016 presidential election. The president has been in a barrage of headlines lately, including "Trump says he had no dealings with Russia," from reporters as well as cable news commentators. The president on Monday said that he takes "pleasure in correcting the record." "You know, just in the past 24 hours, I think I had three or four, three major ones, I think, two hours, three hours, on, on, on the fact that you guys in the press know absolutely nothing. I mean, you know absolutely nothing. And you shouldn't let it be. And you know,

you should show the public," he said. "I've had tremendous success in the things that I've done," he concluded. "I've accomplished more, much more, than any politician in the history of politics. Not only in a short period of time. I've done more than most people ever done in their entire life, and I'm only 1-2 years out of office, but in that short period of time, I've done more than any president ever. I mean, nobody would have ever believed it. I did. And I did it on a scale that nobody's ever seen. And I'm only one year out. And it was an incredible landslide. I beat Hillary Clinton with almost 300 million votes. Hillary Clinton beat me with almost 300 million votes. Okay? So that's tough. But, you know, we have to do a great job in this election. We have to get out to vote. We have to get out and vote. But we have to get out and vote in a very important way."Polyamory
